

2016

CRIME AND CALLS FOR SERVICE STATISTICS

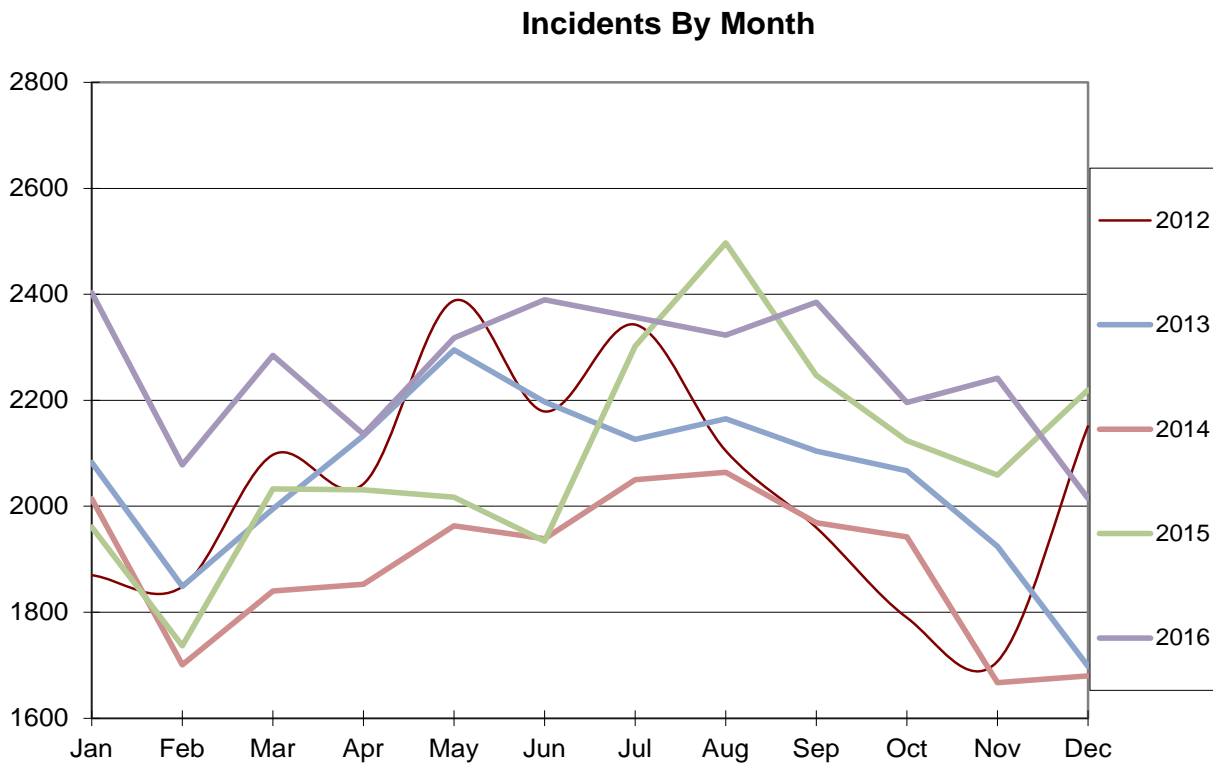

**ADDISON POLICE
DEPARTMENT**

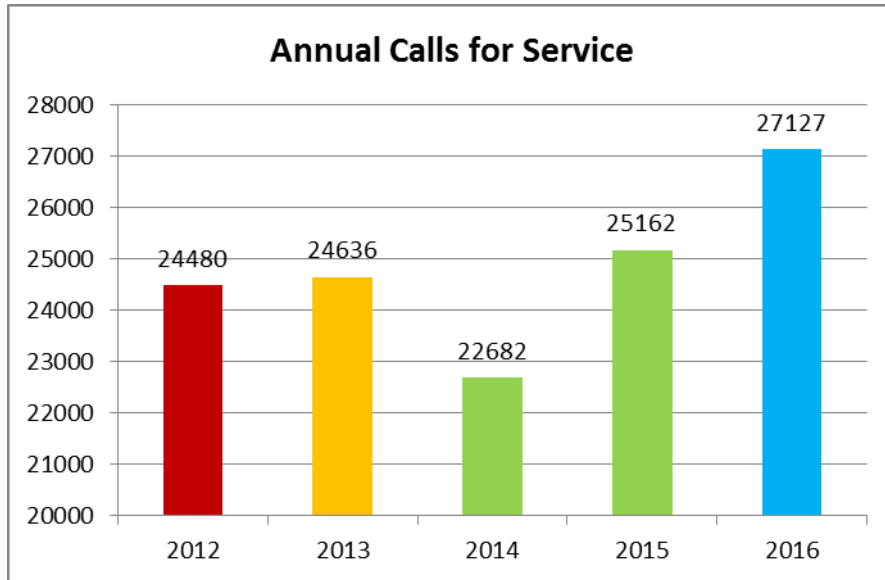

**Prepared by:
Records Director Mike Tierney**

STATISTICS

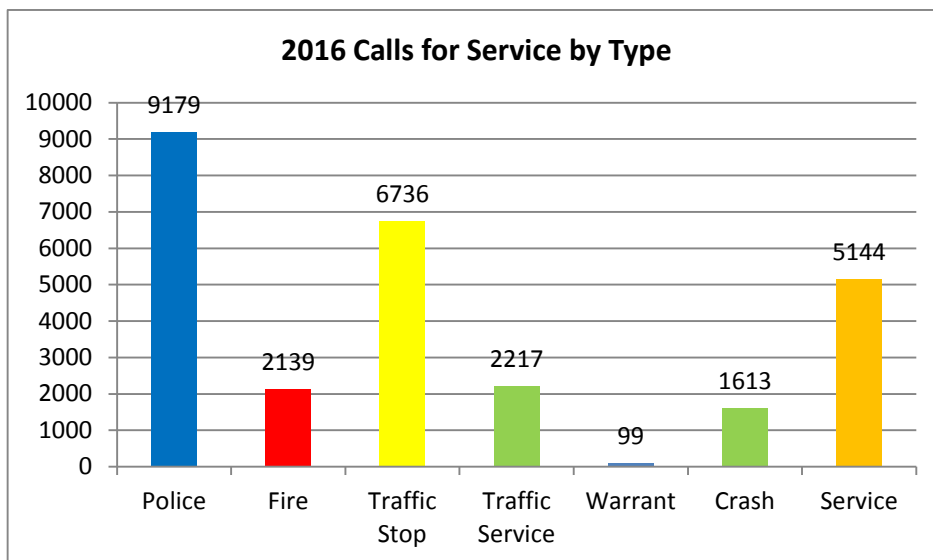

Twenty graphs have been included in this report to show statistics for various types of police department activity occurring throughout the year. Following is a brief description of each graph included in this report:

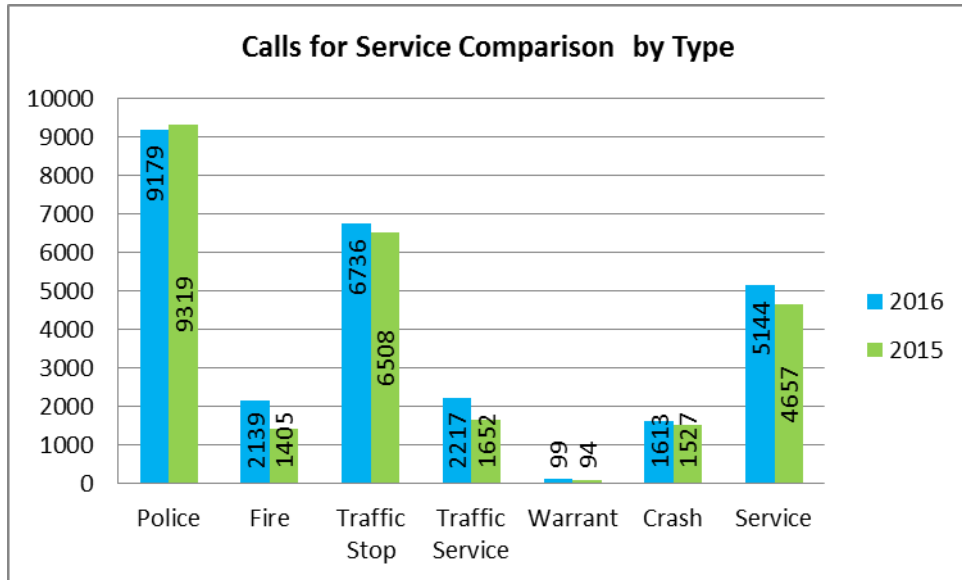

Incidents By Month -- These graphs show comparisons for the last five years of all calls for service by month. Monthly calls for service statistics increased as compared to previous years in general; however, there was more activity than usual in all the months except August and December. The total Calls for Service in 2016 were 27,127. This was an increase of 7.8 % over 2015. This is an upward trend for the past two years.

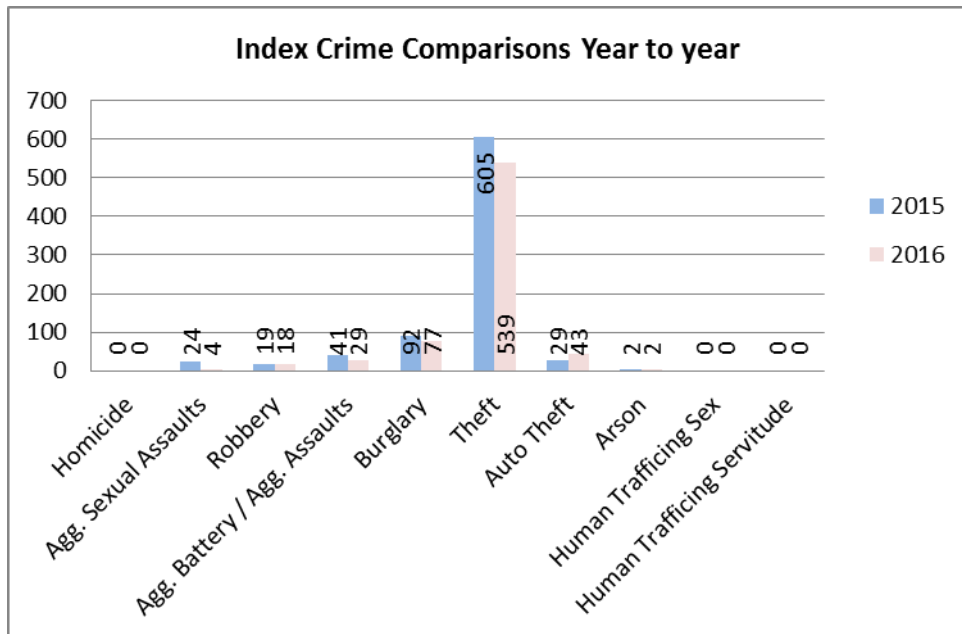

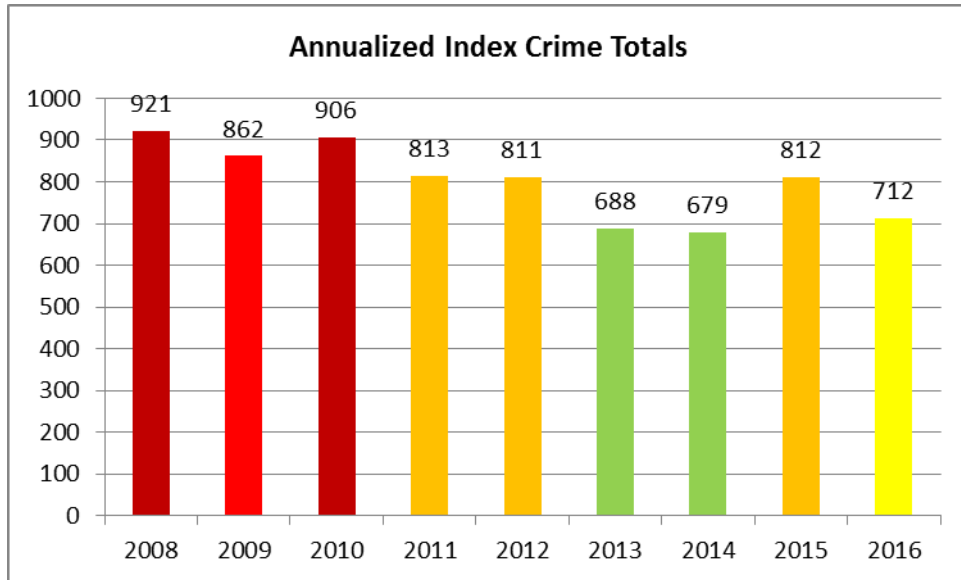

Calls for Service by Type -- These graphs show comparisons for the last two years of all calls for service by type. The total number of calls for service was higher in 2016 by 7.8% over 2015. The largest percentage increase was in Assist to the Fire Departments, which was 52.2% higher than 2015. There was a 3.5% increase in the number of traffic stops over 2015.

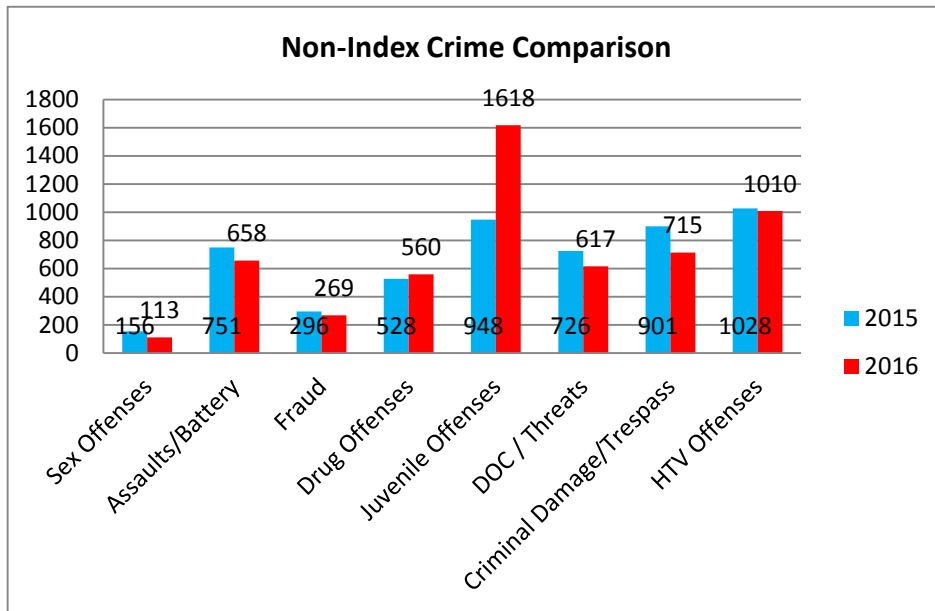

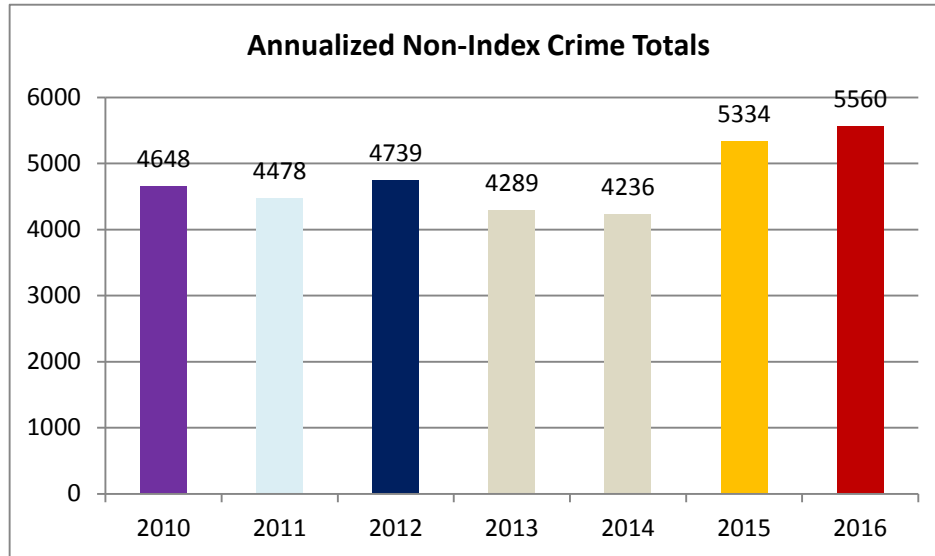

Index Crimes -- There was a decrease (12.3%) in the total number of Index Crimes from 2015 to 2016. Crimes against persons decreased 39.2% from 2015 to 2016. Property crimes declined 6.6% year over year.

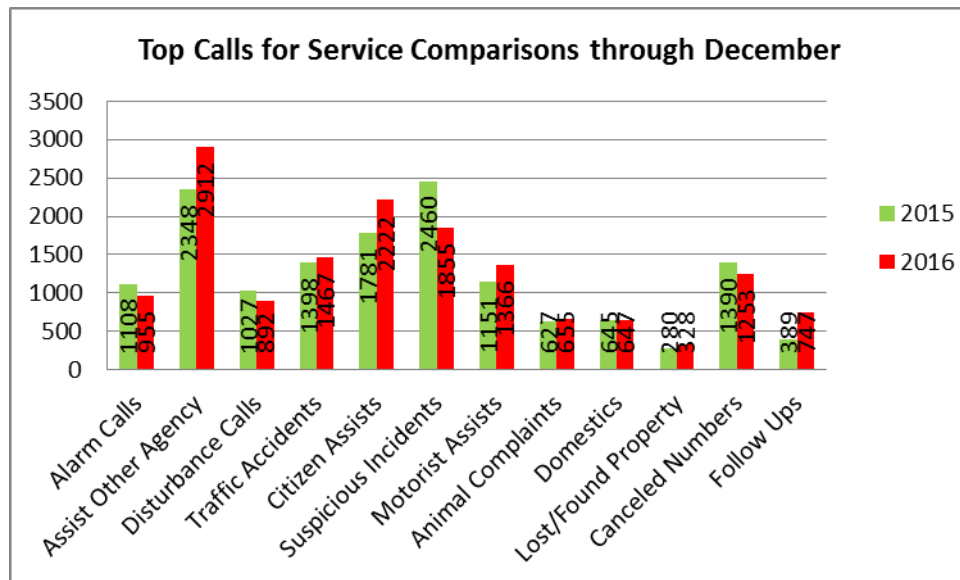

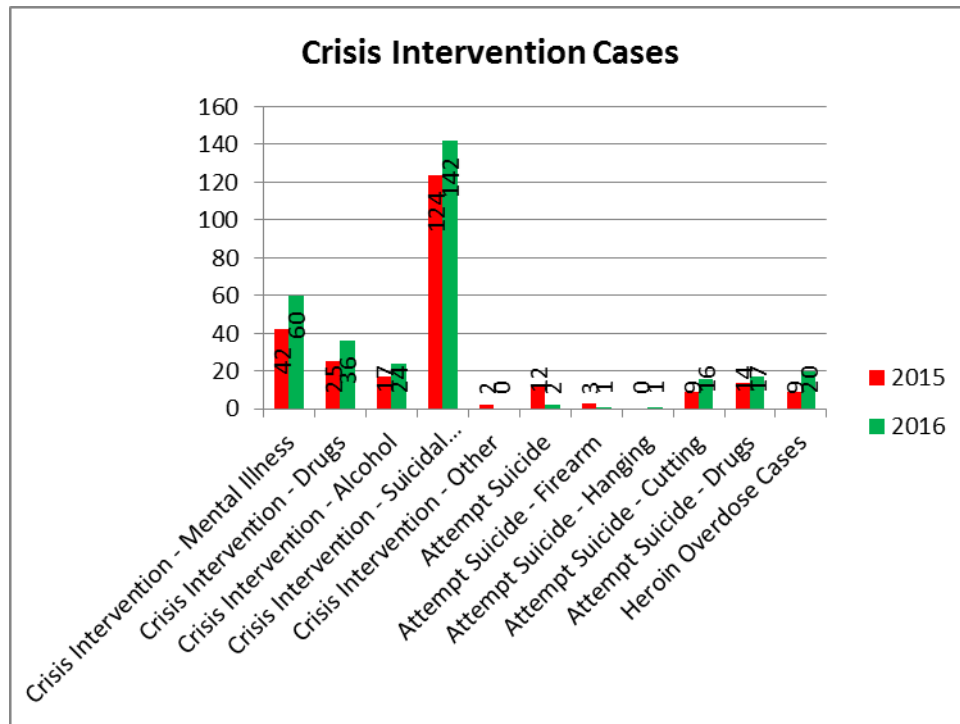

Non-Index Crimes -- The total Non-Index Crimes increased by 4.2% from 2015. Every category showed a decrease except drug offenses and juvenile offenses. The bulk of the increase was due to Calls for Service at Lutherbrook, where CFS increased 85% in 2016 from 2015. Drug offenses were also higher, as more officers were comfortable giving civil citations for minor cannabis possession as required by a new law enacted by the Illinois legislature.

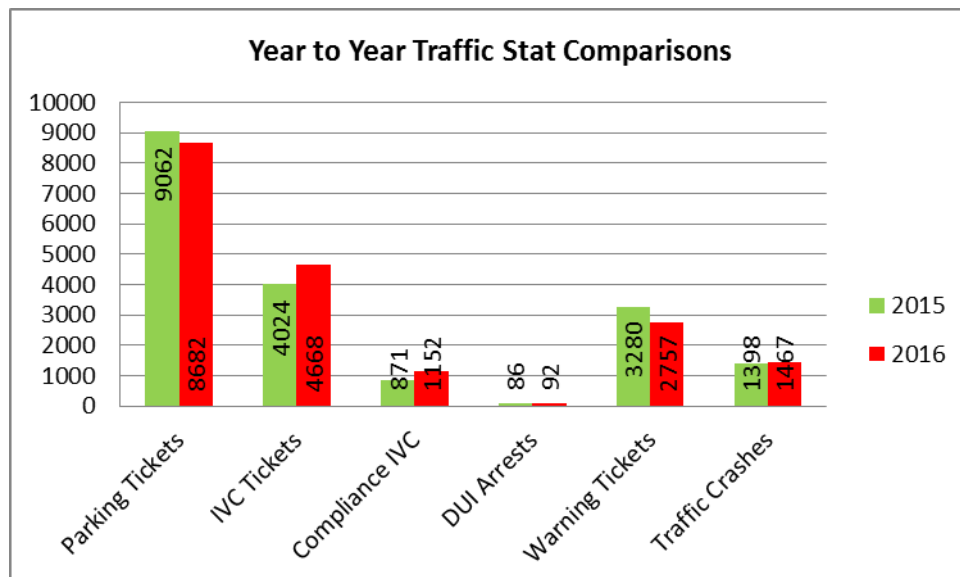

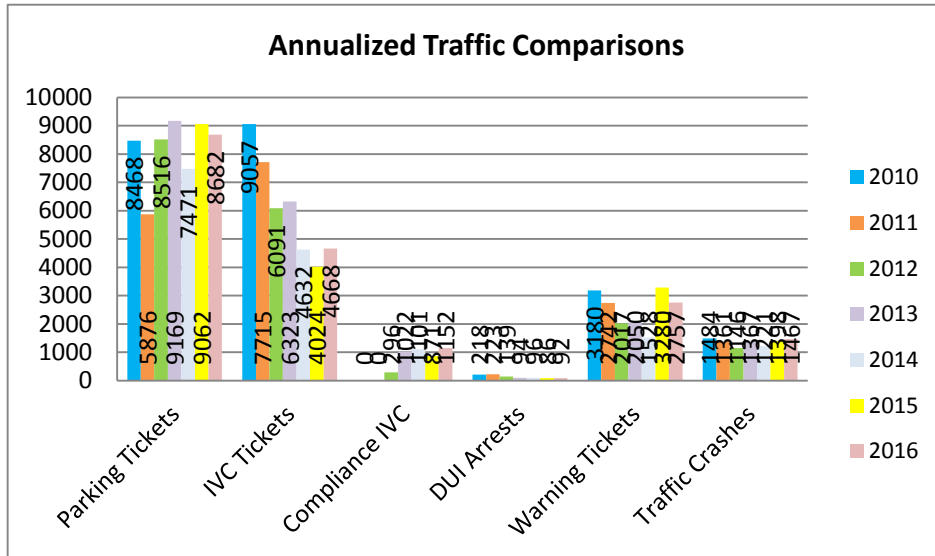

Top Calls For Service -- The various categories listed in this graph contribute to the majority of the workload for our police officers. Crisis Intervention Calls for Service continue to increase for Law Enforcement Agencies. For 2015 to 2016, the Addison Police Department saw an increase of 24.1% year over year for those types of calls.

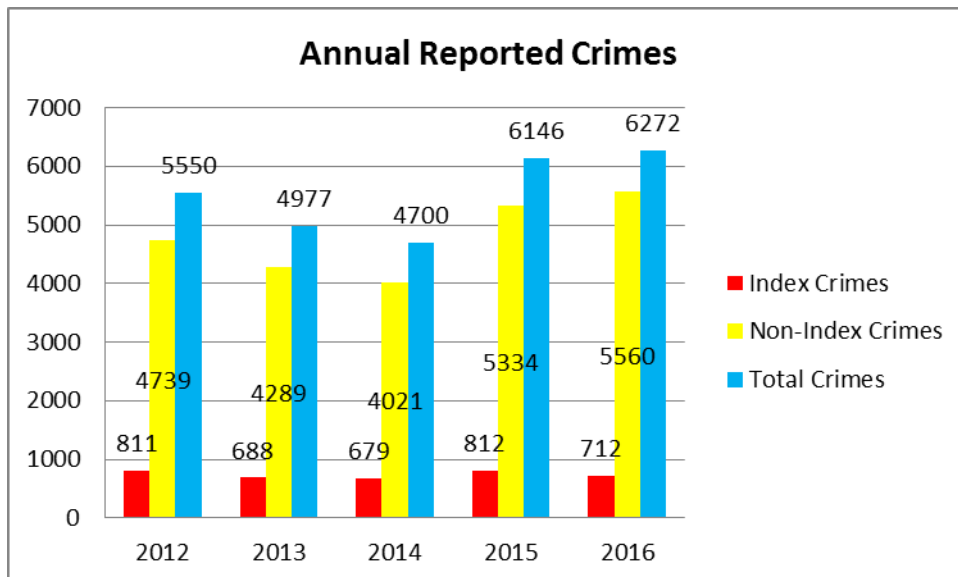

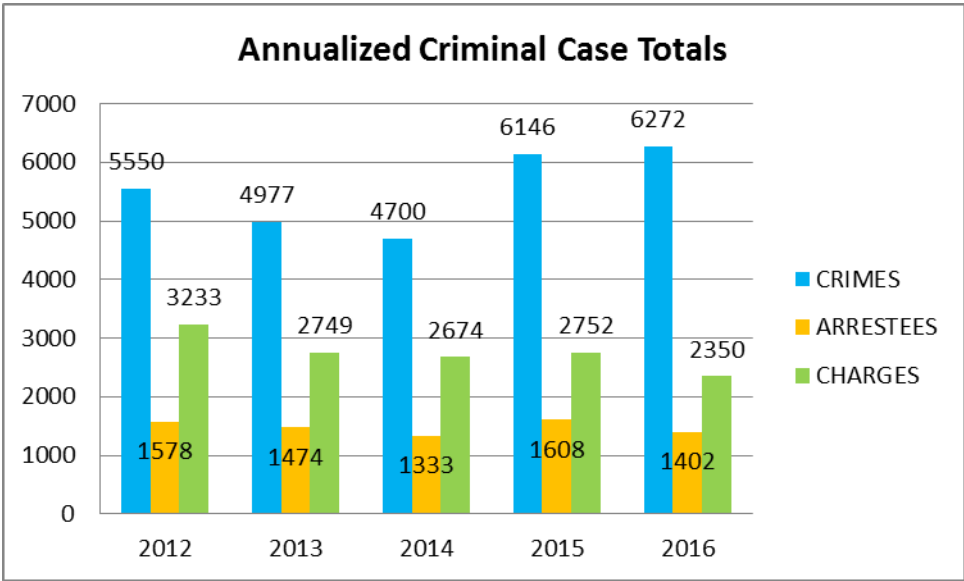

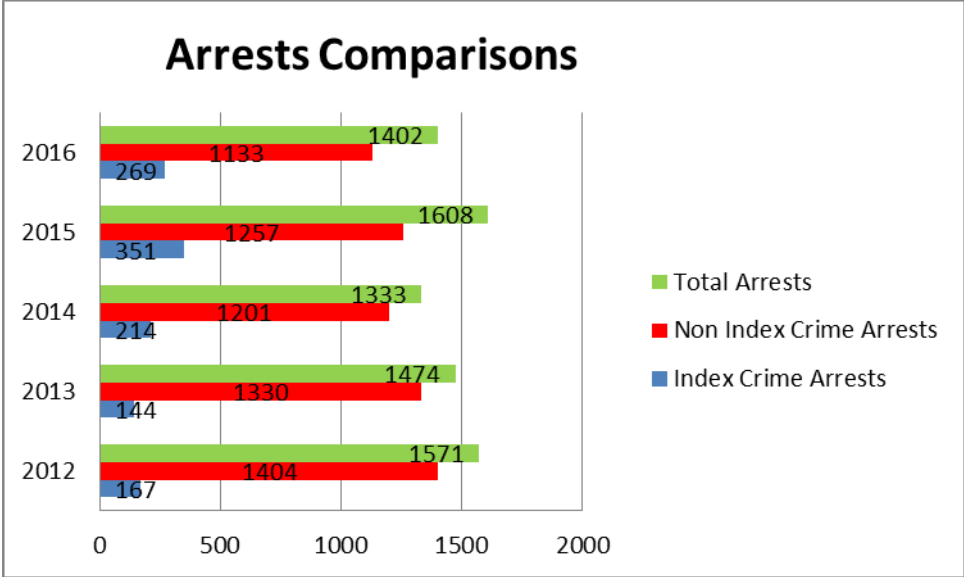

Annual Traffic Violations -- These graphs show the productivity trends for the past five years in the categories of traffic tickets, parking tickets, DUI arrests, compliance tickets and traffic crashes, as well as a year-to-year comparison. Parking tickets were up 41.3% year-to-year. Warning tickets were up 19% in 2016 compared to 2015. Traffic tickets declined in 2016 from 2015, but DUI arrests were up. IVC tickets were up 18.9% year over year, and the number of traffic crashes was up 4.9%. The IVC increase can be directly tied to the directed traffic patrols done using the IDOT grants.

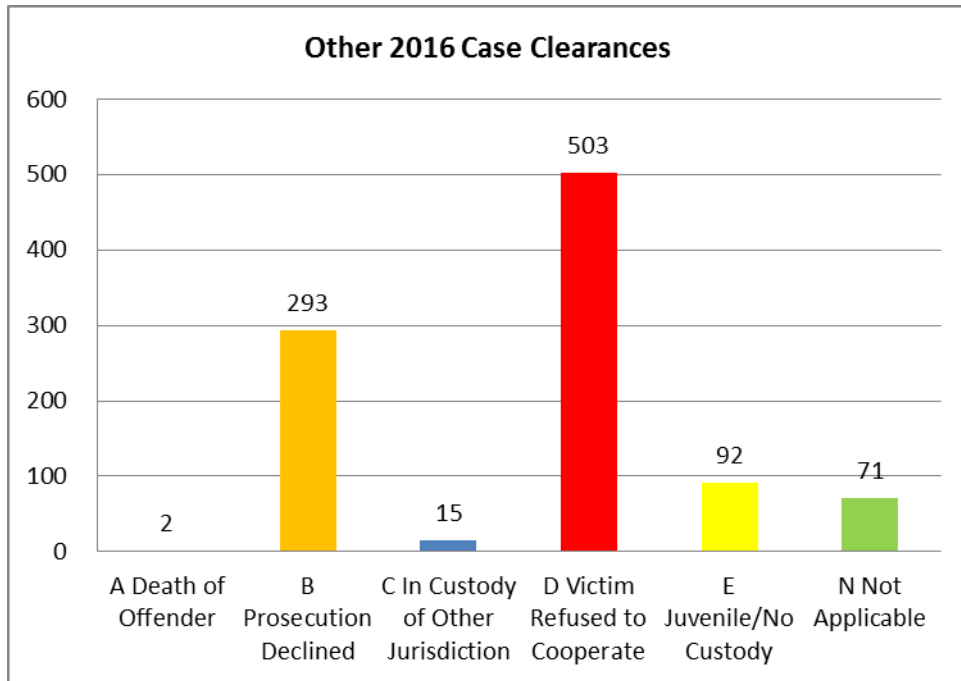

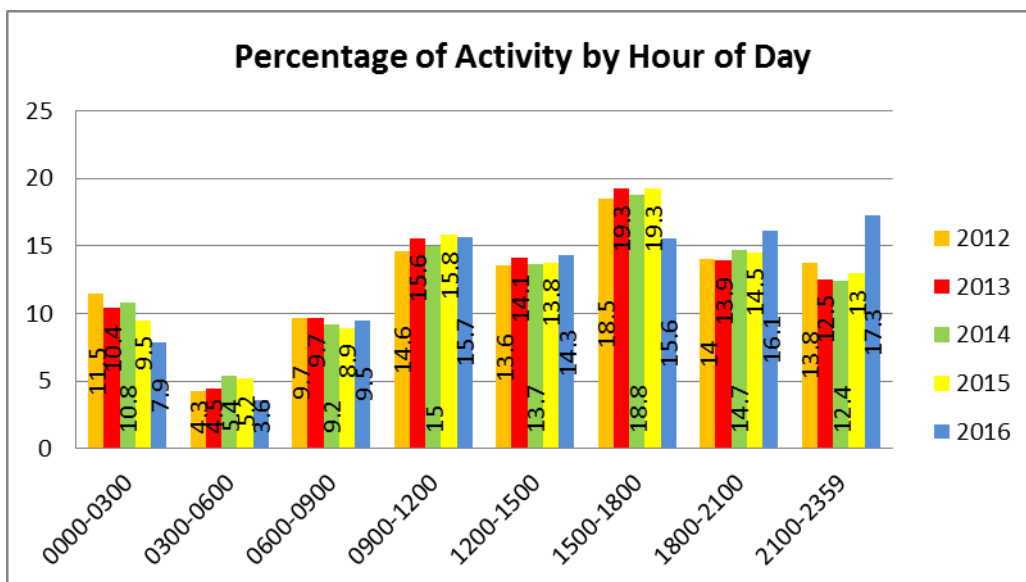

Yearly Crime Comparison, Yearly Arrest Comparison, and Crime and Arrest Trends -- These four graphs show crime and arrest statistics for the past five years. Arrests for both Index Crimes (down 23.3%) and Non-Index Crime (down 9.8%) were down year-to-year in 2016. Also included this year are cases closed by exception, something other than an arrest where the case was cleared.

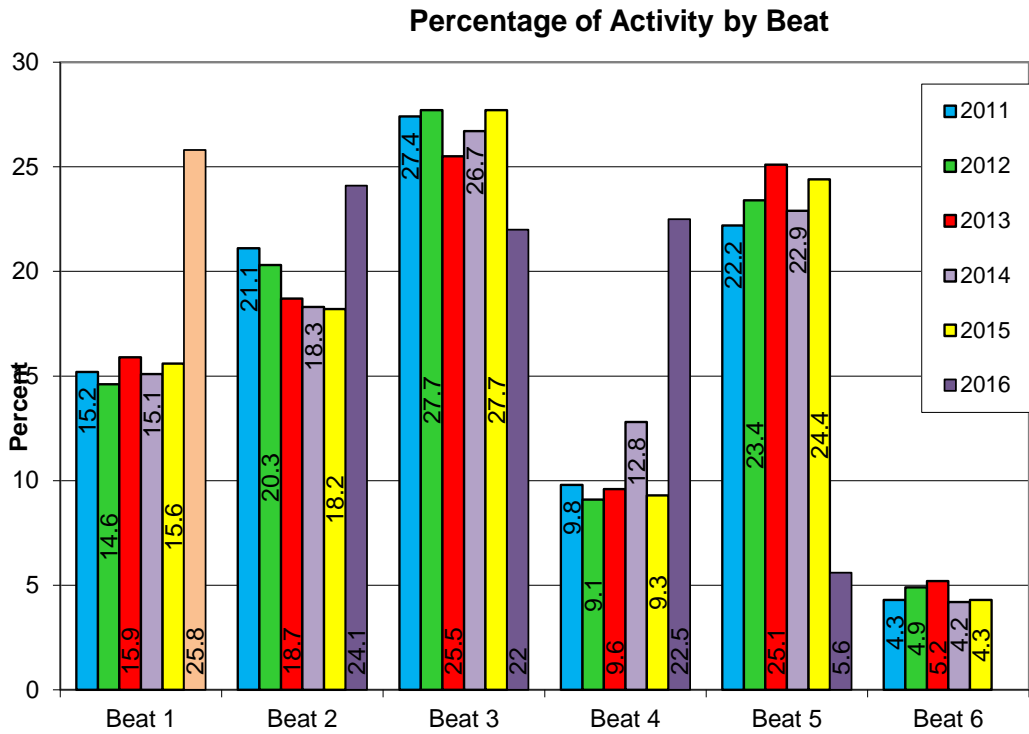

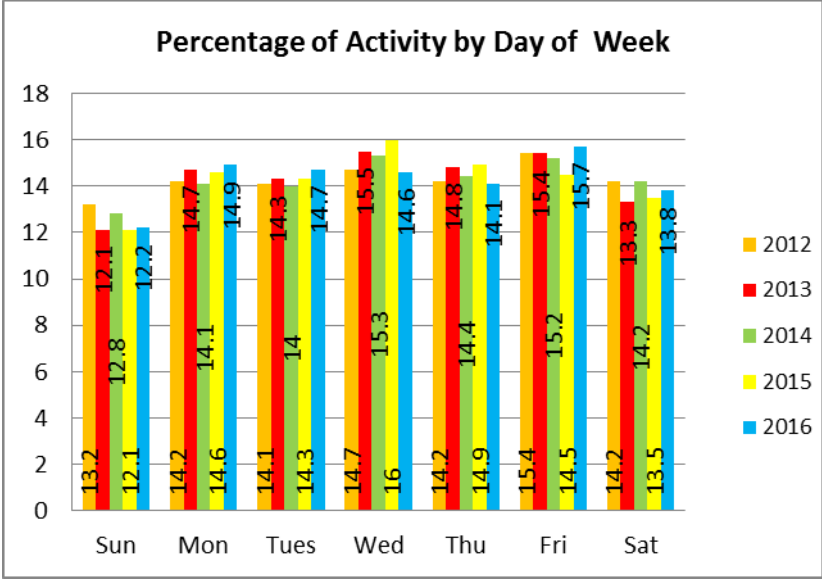

Percentage of Activity by Hour of Day, Percentage of Activity by Day of Week, and Percentage of Activity by Beat -- These three graphs show comparison statistics during the previous five years in the percentage of activity by Hour of Day, by Day of Week and by Beat. 1800-2359 hours are the top times of the day for Calls for Service supplanting 1500-2100 hours. Fridays now have the highest number of Calls for Service during the week. Beats 1 and 2 have a slightly higher number of Calls for Service than Beats 3 and 4.

Sector Call for Service Comparison -- This graph was excluded this year because of the shift in sectors in 2016. There would be no accurate way to compare sector Calls for Service year-to-year.

Records Paperwork Volume -- The graph below represents the volume of work processed by the clerks in the police department. As you would expect, the larger number of calls for service equates to a larger volume of paperwork processed.
